

Is Data Science a Paradigm Shift?

Philip E. Bourne PhD

peb6a@virginia.edu

[Mississippi State University](#)

Yes!

Evidence – in 45+ Years in Academia I Have Never Seen Anything Like It*

- It is a response to the digital transformation of society
- It is touching every discipline (aka vertical)
- We can't keep the students out of our classes

- Cause – large amounts of digital data
- Effect – interdisciplinarity, openness, translation, search for responsibility and more

shutterstock.com · 168904427

In summary, it is disruptive and higher ed. better pay attention

* This statement predates ChatGPT!

Big data and data science are like the Internet...

If I asked you to define them you would all say something different, yet you use them every day...

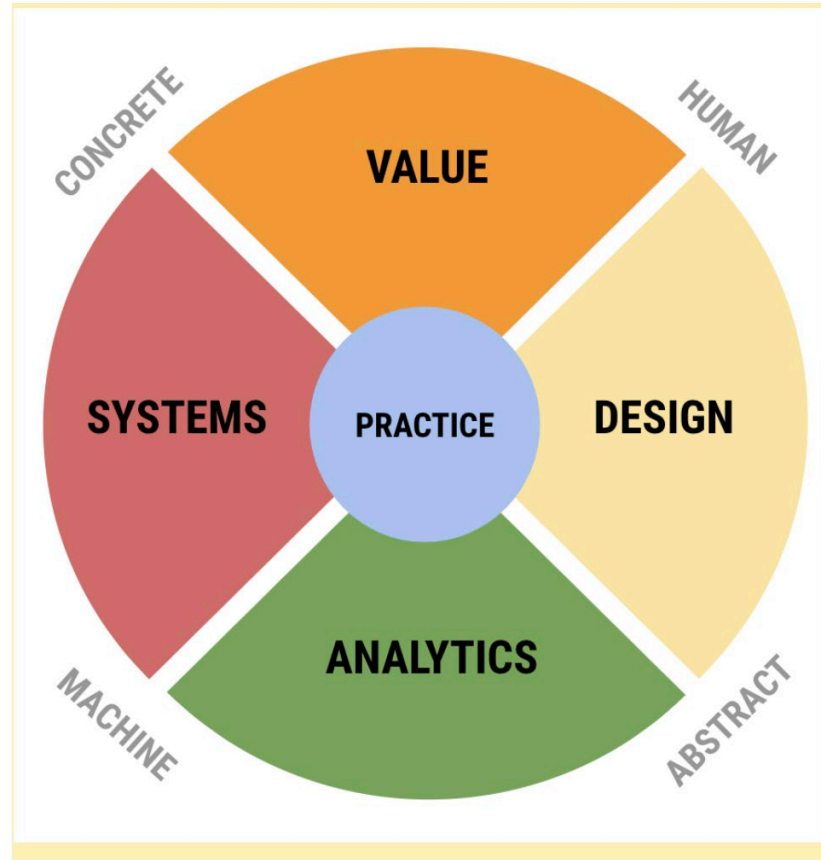

Grand Unification of Sciences

<http://vadlo.com/cartoons.php?id=357>

Given these precedents about data science we should start with a definition/framework

In the context of a new school this gets everyone on the same page and helps in starting to build a culture

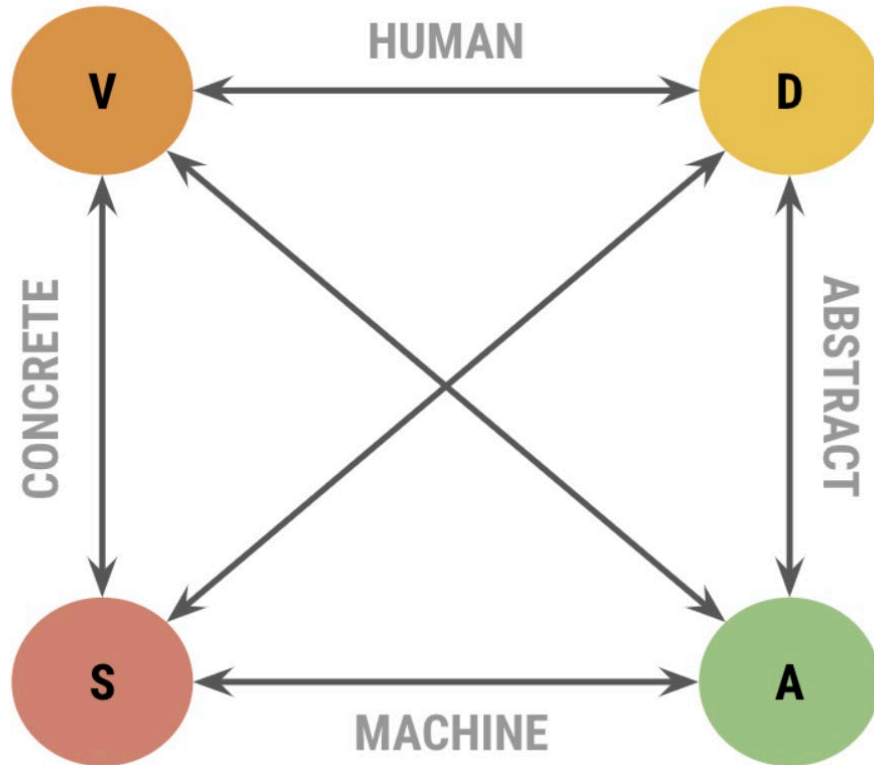

One Definition of Data Science – The 4+1 Model (aka domains)

The 4+1 Model of Data Science ([CC BY-SA 4.0](https://creativecommons.org/licenses/by-sa/4.0/))

- **Value** – assuring societal benefit
- **Design** - Communication of the value of data
- **Systems** – the means to communicate and convey benefit
- **Analytics** – models and methods
- **Practice** – where everything happens

The Data Science Interplay

The Science of Data

- Value + Design = Openness, responsibility
- Value + Analytics = Human centered AI, algorithmic bias
- Value + Systems = sustainability, access, environmental impact
- Design + Analytics = literate programming, visualization
- Design + Systems = dashboards, engineering design
- Analytics + Systems = ML engineering

Okay, so we have a definition to ground what we do now we need a set of principles to act as the guard rails:

- *Excellence*
- *Inclusivity*
- *Openness/
Transparency*
- *Be FAIR*

Inclusivity

SDS Welcomes Siri Russell, Associate Dean of Diversity, Equity, and Inclusion

Siri Russell joins the School of Data Science (SDS) as the Associate Dean of Diversity, Equity, and Inclusion, a position created to be an integral part of the School's leadership team and an important advocate for equitable and responsible use of data to serve the common good.

UVA

SCHOOL of DATA SCIENCE

So we have a definition of data science and we have a set of guiding principles, what else?

A pitch – hey it's a business

<https://pebourne.wordpress.com/>

A SCHOOL WITHOUT
WALLS

So we have a definition of data science, a set of guiding principles, and a pitch where does this take us?

Stated another way, what do we want to be recognized for in 10 years?

<https://pebourne.wordpress.com/>

Here is one existing exemplar

Acute Care & Trauma Surgery

UVA's Division of Trauma and Emergency General Surgery provides patient care services for traumatic injury in central Virginia. UVA is a Level I Trauma Center and functions as an entity within the Clinical Care Services of the UVA Health System.

The Adult Trauma Service admits approximately 1,100 severely injured patients per year. The Pediatric Trauma Service admits approximately 175 patients between the ages of 0 – 17 per year. There are approximately 1,900 injury admissions per year to the medical center. Under the direction of [Jeffrey S. Young, M.D.](#) and [J. Forrest Calland, M.D.](#), the service is covered by a Chief Surgical Resident, two Critical Care Residents (PGY 2), two Interns (PGY 1), and two Nurse Practitioners. The service also cares for general surgical and critical care burn patients.

<https://www.thirdway.org/report/a-lifetime-electronic-health-record-for-every-american>

Researcher and Assistant Professor of Medicine Dr. Thomas Hartka, also a current online Masters in Data Science student, is combining two disparate data sets—electronic health records and DMV crash data—to save lives after motor vehicle crashes.

“I enrolled in the MSDS program to expand my research on automotive safety. I have already used techniques from classes in my work. I hope to expand my research to real-time analytics to improve emergency room care.”

— Dr. Thomas Hartka, UVA School of Medicine

Why *Responsible* Data Science?

- A defining feature
- A partnership between STEM, social sciences and the humanities
- Where UVA has strength

UVA

SCHOOL of DATA SCIENCE

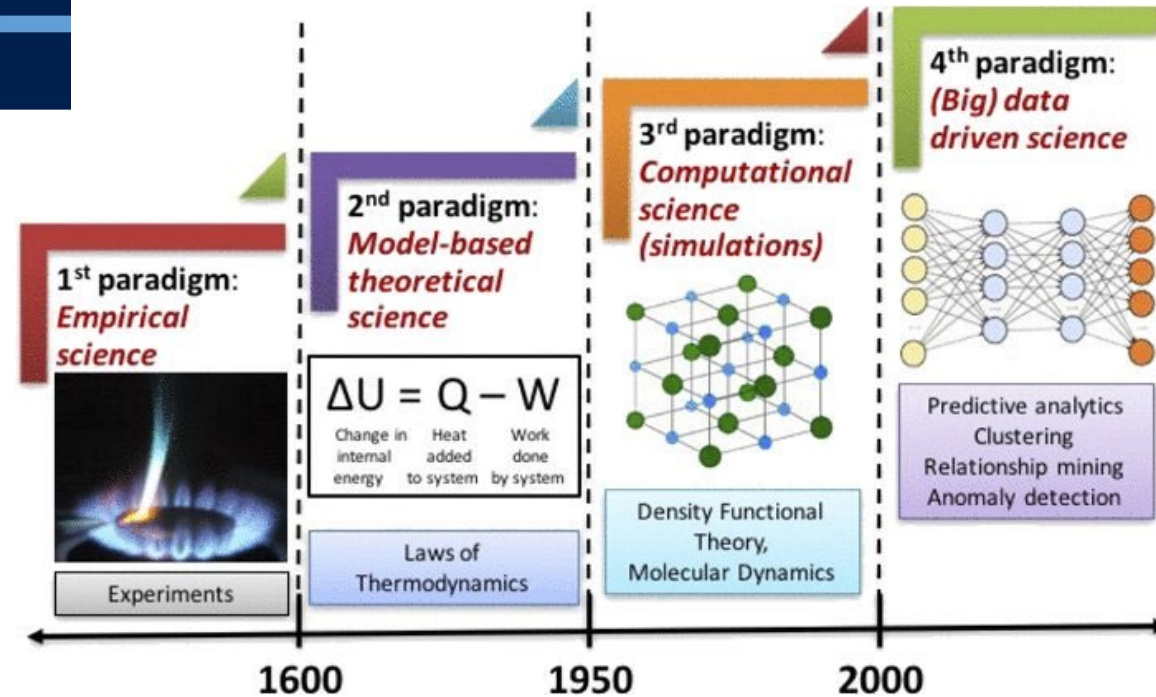

Yet another way of thinking about it – the fifth paradigm..

https://www.microsoft.com/en-us/research/wp-content/uploads/2009/10/Fourth_Paradigm.pdf

[https://en.wikipedia.org/wiki/Jim_Gray_\(computer_scientist\)](https://en.wikipedia.org/wiki/Jim_Gray_(computer_scientist))

Daily Challenges

- Deciding what not to do
- Competition for the best team members (faculty and staff)
- Establishing a diverse team
- Lack of a comprehensive enterprise-wide data infrastructure
- Its easier to conform

During my 5-year interview as dean I was asked,

“Will we need a school of data science in 10 years
wont it be ubiquitous throughout the university?”

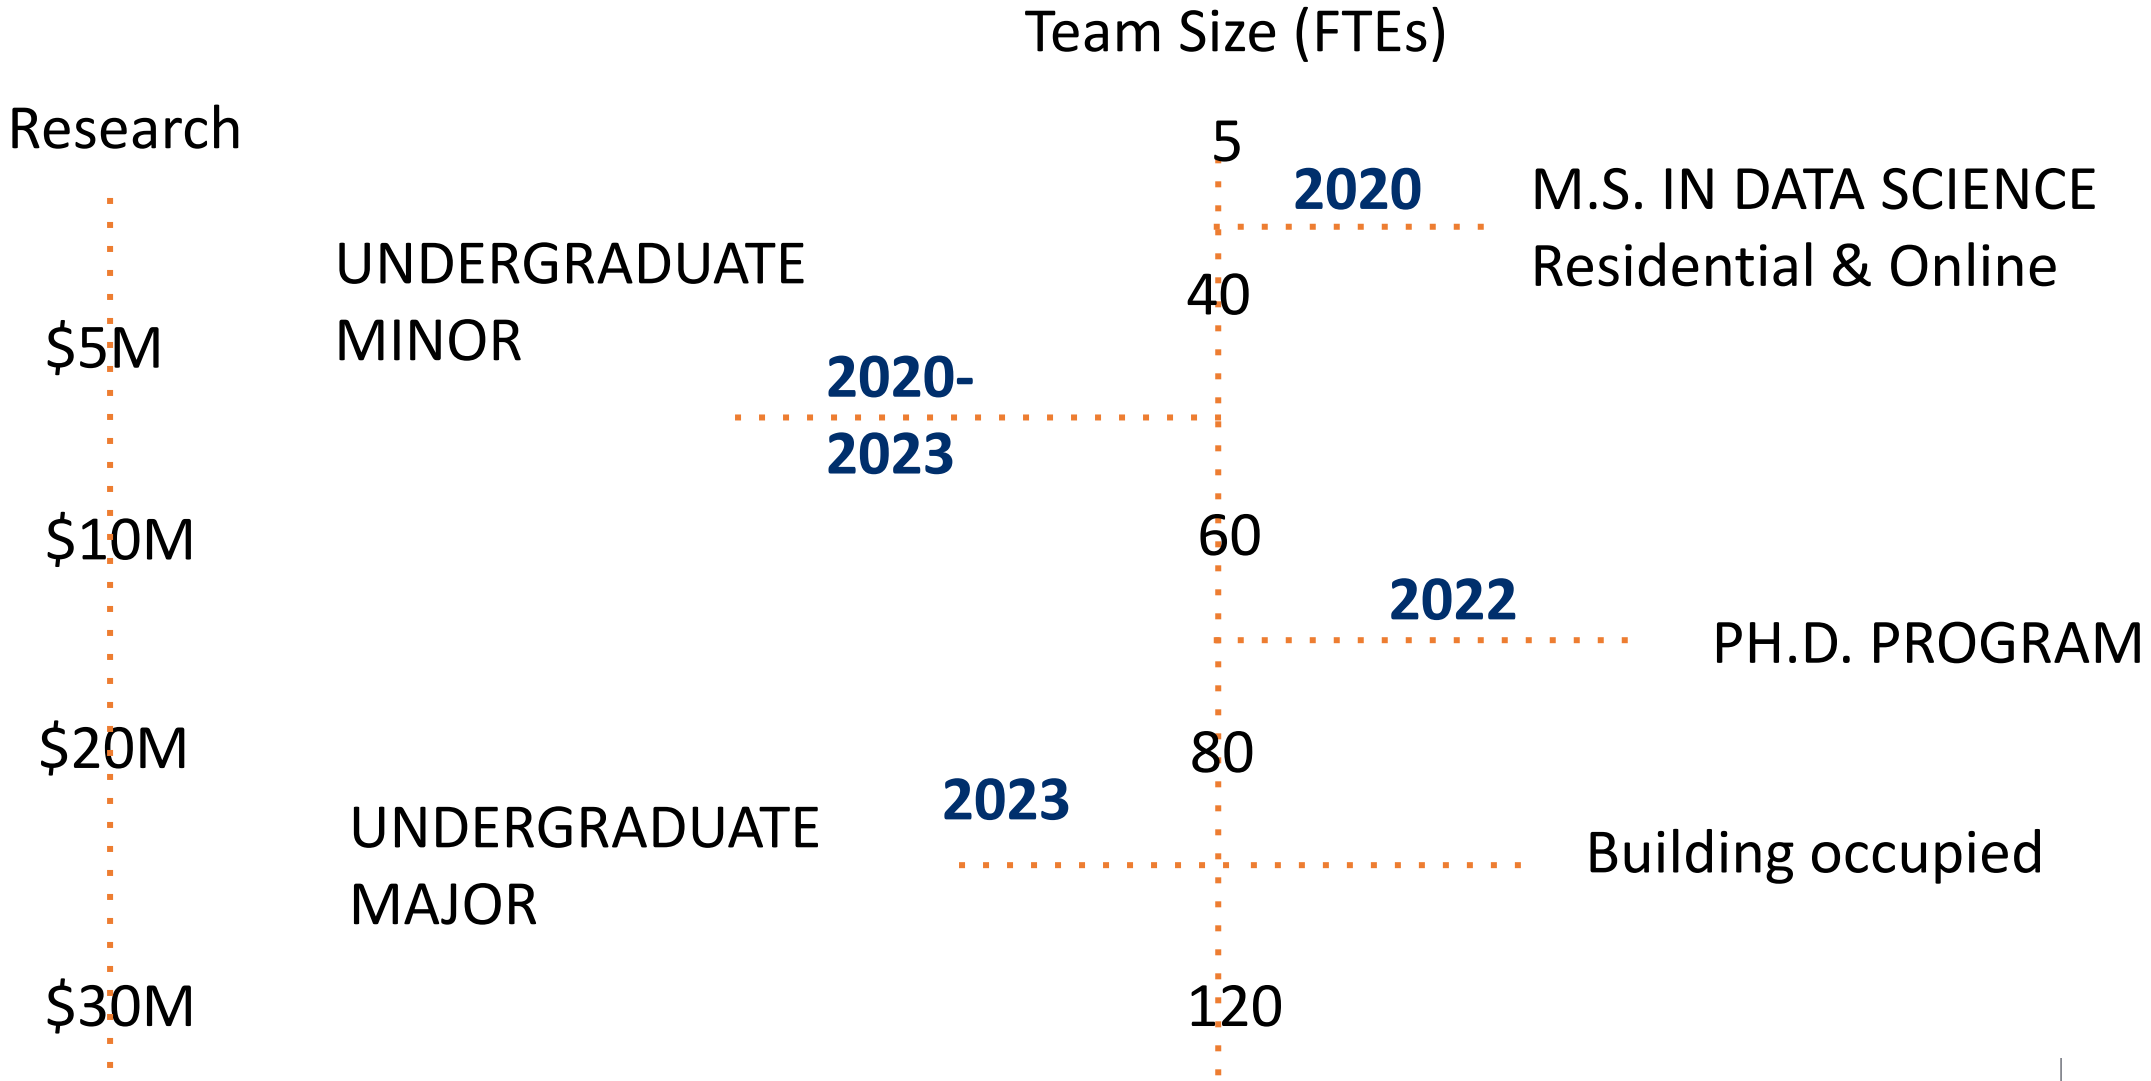

My response,

“Will we need a university in ten years? Wont it be
one big school of data science?”

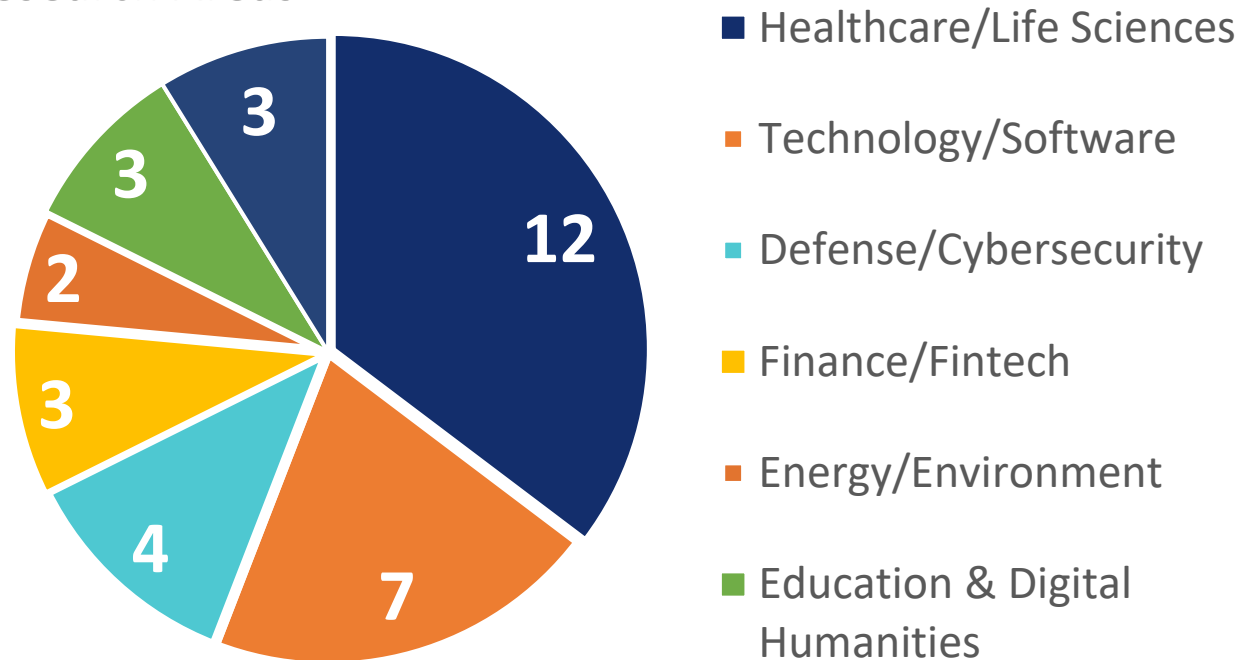

Questions?

Growing the School

SDS Current Research Portfolio

Research Areas

SDS strives to be a connector – a place where interdisciplinary research driven by common data, methods and expertise comes together
